

Hybrid

Full-time

Software Engineer

 London  Hybrid  Full-time

About the Role

Executive summary

Joining Worldover is a rare opportunity to join a business that has found PMF and is currently growing 4–5x every year. The revenue curve is steep and we expect to grow to \$100M over the next 30 months. We are already backed by some of the world's best investors, including Index, Chalfen Ventures and Entrepreneur First.

We operate in one of the largest “niche” markets in the world. The global chemicals industry represents roughly 9% of global GDP and 1.5 million businesses globally. We sell a combination of database products, traditional software and AI agents to deliver what we call the operating system for chemicals.

Background

The software factory for chemicals.

Re-building the entire software stack for 9% of global GDP.

Us: 'Why does your existing software stack not work very well for you guys?'

Customer: 'Because we are ingredient based and none of the software we use actually takes this into account.'

Traditional enterprise software does not work for substance based businesses. Chemicals and ingredient based companies require a unique data model and ontology that accurately reflects how they create their products. Without this, none of their software really works.

The team at Worldover spent years building regulatory products in chemicals and this gave us the insight and capability to create the foundational layer chemicals. Immediately, our customers began asking if we could replace other elements of their software.

We combined this ontological layer with our own coding agent to create a true software factory that re-builds, replaces or implements for the first time a true

operating system for substance based businesses.

We were described in our funding round as 'the most aggressive implementation of a software factory manifesto I've ever seen.' We are pushing agentic coding to the limits and you must be excited about that prospect to want to work here.

This operating system is based on four layers:

1. Correct ontology for chemicals - ingredient and regulatory databases.
2. Customer data layer.
3. Workflow software - think CRM, ERP, MRP, QMS etc all rolled into one.
4. Intelligence and agentic layer on top - insights and automation but only after steps 1-3 have been completed.

Chemicals is massive and it represents almost 9% of global GDP. We are well placed to win this market and build a truly generational company in this space.

We are currently growing rapidly and are backed by some of the world's best investors including Entrepreneur First, Index Ventures and Chalfen Ventures.

Role Brief

The best products are built by people who are willing to put themselves in the shoes of their users. This requires an ability to understand the user experience deeply, translate user needs into effective workflows, and then implement those workflows using strong technical ability.

As a Software Engineer, you'll work across the product to build intuitive, reliable and scalable software for users who depend on Worldover every day. You'll care about the quality of the customer experience and the quality of the implementation.

Your implementations will include full stack features, agentic workflows for users, internal tooling, and more.

In the new world of AI enabled development, we believe technical ability is relevant more than ever. Technical knowledge and experience can be multiplied by AI tools. You'll be working closely with these AI tools in your day-to-day and collaborate with the rest of the team on improving AI development workflows.

Key Responsibilities

Product Engineering and User Experience

Build high-quality product experiences by understanding user needs, translating them into workflows, and implementing them with care.

- Work closely with the team to understand user problems and product requirements.
- Translate customer needs and feedback into clear, effective product experiences.
- Build AI-enabled workflows that help users complete complex tasks.
- Balance technical implementation with a strong sense of usability and design.

Frontend Development

Create dynamic, reliable and polished user interfaces.

- Build and maintain frontend features using React, Typescript, NextJS and Tailwind CSS.
- Develop reusable components and scalable frontend patterns.
- Ensure product interfaces are responsive, accessible and easy to use.

Backend and Platform Development

Contribute to the systems that power the Worldover platform, supporting reliability, scalability and performance.

- Build and work with infrastructure such as AWS, Supabase and Vercel.
- Work with APIs, data models and platform services to support customer-facing workflows.
- Collaborate with the engineering team to improve system architecture and implementation quality.
- Support the delivery of robust, maintainable and scalable product features.

Technical Quality and Delivery

Help the team ship excellent software quickly, thoughtfully and consistently.

- Take ownership of problems from definition through to delivery.
- Review, test and improve features before they reach customers.
- Use tools such as Git, Docker, Supabase, AWS, as part of the development workflow.

Team Collaboration and Growth

Work closely with a high-performing team, learning quickly and contributing to the company's technical culture.

- Collaborate with Product, Engineering and leadership to shape product direction.
- Learn quickly across unfamiliar technologies, tools and domains.
- Contribute to overall team AI tooling knowledge and ability.
- Contribute to a culture of high standards, strong ownership and thoughtful execution.
- Bring energy, curiosity and ambition to a fast-moving startup environment.

Who are you?

If you think you'd be exceptional in this role, we'd like to hear from you regardless of your background. But, as a general guide, here's what we're looking for.

- You are passionate about coding, problem-solving and building user-friendly products.
- You have experience building projects with impressive technical depth.
- You understand how to translate user feedback and requirements into products that people love.
- You are comfortable with, or excited to learn Typescript.
- You have played around with AI implementations as parts of projects.

- You have an eye for design and care about creating intuitive, aesthetically pleasing product experiences.
- You are ambitious, diligent and excited by the challenge of building complex software in a fast-moving environment.
- Interested in AI first development.

Even better if:

- You can demonstrate impressive technical depth in some project or area-of-expertise.
- You have experience with backend Typescript.
- You have worked with AWS or cloud-based infrastructure.
- You have experience building workflow-driven or configurable software platforms.
- You have worked on products used intensively by power users.

Tech Stack

Frontend: React, Typescript, NextJS, Tailwind CSS

Backend: Typescript running on AWS and Supabase

Other tools: Git, Docker, Openrouter, WorkOS, Fly IO

Our Values

Integrity: You act with integrity in everything you do—whether it's coding, collaborating, or representing Worldover. Trust is the foundation of our team.

Trust: You will be trusted to drive progress, work independently, and push the company forward. We don't micromanage; we trust you to bring your best every single day.

Diligence: Hard work is non-negotiable here. We believe in sustained effort, focus, and getting the job done, even when it's tough. We're not about unnecessary hours, but we are about doing whatever it takes to achieve our goals.

Excellence: We recruit the best talent and set big, ambitious goals. You'll be expected to reach new heights and hold yourself and the team to high standards.

Commitment: You are fully committed to the mission and the challenge we've set. While we value balance, this company should play a crucial role in your life.

Respect: We have a zero-tolerance policy for negativity. We create an inclusive, respectful, and challenging environment where everyone's unique background and ideas are celebrated.

Benefits

- 25 days holiday plus Bank Holidays to ensure you have the time you need to relax and recharge.

- Pension scheme with Smart Pension, with 3% from us and 1% from you.
- Equity.
- Hybrid working, with Monday, Tuesday and Thursday onsite in our HQ in Camden.
- Remote working for the rest of the week.
- Standard working hours of 9am–6pm, with flexibility to support work-life balance.
- Learning and development support to help you grow.

Interview Process

- Initial Screening, 20 minutes — Engineer.
- Technical Deep Dive, 45 minutes — Senior Engineer.
- CTO Chat, 30 minutes — CTO.
- Onsite Final, 1 hour — CTO and CEO.

Celebrating Diversity

We encourage, support and celebrate diversity in the workplace and in all aspects of life. We are proud to be an equal opportunity employer and strive to ensure a balanced and measured approach to all aspects of employment.

We want this to be the best place you've ever worked; a fun environment where you will positively influence the culture and have the freedom and confidence to do your best work with the respect and trust of your colleagues.

Polite Recruiter Note

We currently do not wish to work with any external recruiters or agencies. Please do not contact us at this stage, as it will jeopardise any opportunity of working together in the future.
